

Geraniol Insect Repellent Products

Pump Spray Lotion

Pump Spray

For the first time, there is truly an effective, patented and well-tested method of dealing with most annoying flying insects- including the mosquito, and it is Geraniol. Tested for years by the University of Florida, and patented by the University of Florida, Geraniol has been proven in various laboratory and field tests to be the best available flying Insect Repellent available. This is a natural, DEET-free product which requires no EPA registration.

Applications

The "pump" is one of the most effective ways of applying this highly efficient Geraniol repellent. By spraying the liquid directly on clothing or skin, the Geraniol vapors will form a protective barrier to deter blood-sucking insects from biting. This spray lotion does not contain any propellants, but relies on a highly effective metered pump sprayer to dispense a fine mist over the area to be treated. Ideal for uses around the ankles, wrist or neck, where insects tend to invade clothing. Use once for hours of insect protection.

Packaging

The Pump Spray Lotion is packaged in the following configurations:
